

Multiple Choice Questions

2024-09-19

Contents

1. Why are the instructors sharing most of the material in odt, docx, pdf, html and md?
 - To insure compatibility across operating systems (Android, Linux, Windows, MacOS, ...).
 - To make it easier to access the resources in multiple ways (print, screen, etc.)
 - All of the above.
2. What does "free" software means?
 - That the software has no value.
 - That the users can run the software for any purpose and study its source code.
 - That it is not developed by a company.
 - That the software can be downloaded at no cost.
3. In your IDE, the shortcut to compile your program is usually...
 - "Build your solution", ctrl + shift + B or Cmd + B
 - "Save", ctrl + S or Cmd + S
 - "Exit", alt + F4 or Cmd + q
 - "Start without debugging", Ctrl + F5 or Cmd + F5
4. To share or backup a project, you need to...
 - share the .sln file.
 - share the .cs file.
 - share the .csproj file.
 - zip the folder containing the .sln file and another folder with multiple files and folders in it.
5. If your IDE returns the message

```
Program.cs(21,21): Error CS0117: 'Console' does not  
↪ contain a definition for 'WiteLine' (CS0117)  
↪ (Solution)
```

This means that...

- That you misspelled the word "WriteLine".
- Your program successfully compiled and is ready to be executed.
- That the "Console" class does not exist.
- Your IDE was not properly installed and you should reboot your computer.

6. Consider the following code:

```
int age, defaultChoice = 0;  
decimal averagePrice;
```

Which of the following is correct?

- It contains declaration and initialization statements.
- It declares variables of two different datatypes.
- Only the value of defaultChoice is set.
- All of the above.

7. Consider the following code:

```
int person = 12;  
int pie = 5;  
int piePerPerson = pie / person;  
Console.WriteLine("Each guest gets " + piePerPerson +  
↪ " pie(s).");
```

What will be displayed by it?

- Nothing; an error will prevent from compiling it successfully.
- "Each guest gets 2.4 pie(s)."
- "Each guest gets 0.41666666666666666666666666666666..." (it will never ends, displaying 6 forever).
- "Each guest gets 0.4166666666666667 pie(s)."
- "Each guest gets 0 pie(s)."

8. Consider the following statement:

```
decimal balance = 2.5M;  
decimal price = 12;  
decimal remainingBalance = balance - price;
```

Which of the following is correct?

- This program will not compile because the result of balance - price is not a decimal.

- This program will not compile because a decimal cannot be negative.
 - This program will compile.
 - This program will not compile because you cannot store an integer value (12) in a decimal.
9. The method used to read a string from the user is called...
- ReadString
 - ReadFrom
 - ReadLine
 - ReadInput
10. Consider the following program:
- ```
Console.WriteLine("Enter your age.");
string fromUser = Console.ReadLine();
int age = _____ (fromUser);
```
- To correctly be able to store the string in fromUser into age, you should replace \_\_\_\_\_ with...
- ( int )
  - int.Parse
  - Nothing: as long as the user enters an integer value, we can store it into age just fine.
  - None of the above.
11. What are, respectively, the return types of a constructor and of a ToString method?
- Constructors do not have a return type, and a ToString method returns a **string**.
  - Constructors and ToString methods both return **strings**.
  - Constructors returns a **string**, and a ToString method does not return anything (it simply displays a text).
  - It is impossible to know ahead of time, as this depends of the class they are implemented in.
12. What is the name of a constructor method?
- Nothing: an error will prevent from compiling it successfully.
  - Whatever the name of the class is.
  - It does not have any.
  - The name of the instance it creates.
  - Constructor
13. What are the three logical connectives in C# (that we studied)?
- And (&&), or (| |) and negation (!).
  - Equality (==), greater than (>) and less than (<).
  - And (and), or (or) and negation (not).

14. Which of the following will evaluate to true?

- `3 > 1 && 2`
- `(3 > 1) && 1 != 0`
- `!(3 > 1)`
- `3 > 1 || 2`

15. Will the following expression evaluate, and if so, what will it evaluate to?

`true == false || 2 / 1 > 0 && 3 - 1 != 2 * 0.5 + 0.5`

evaluates?

- It will evaluate to a number.
- It will evaluate to **false**.
- It will evaluate to **true**.
- It will not evaluate.
- None of the above.

16. What will be displayed by the following code?

```
int number = 10;
while (number <= 15)
{
 number+=2;
 Console.Write(number + " ");
}
```

- `12 14 16`
- `10 11 12 13 14 15`
- `10 11 12 13 14`
- `10 12 16`
- `10 12`
- `10 12 14`
- `12+14+16`
- `10+11+12+13+14+15`

17. What will be displayed by the following code?

```
int i = 0;
while(i < 10)
{
 Console.WriteLine(i);
}
```

- `0` followed by a new line, forever.
- `0 1 2 3 4 5 6 7 8 9`
- `0 1 2 3 4 5 6 7 8 9` with a new line between each number
- Nothing

18. Consider the following code:

```
Console.WriteLine("Enter... something!");
int answer;
bool valid = int.TryParse(Console.ReadLine(), out
↪ answer);
Console.WriteLine($"returns: {valid},
↪ value:{answer}");
```

If the user enters "Train", then it will display:

- returns: False, value: 0
- returns: True, value: 0
- returns: True, value: Train
- returns: False, value: Train
- Nothing: the program will crash.

19. Consider the following code:

```
string answer;
Console.WriteLine("Enter something");
answer = Console.ReadLine();
while (answer != "yes" || answer != "Yes"){
 Console.WriteLine("Enter something");
 answer = Console.ReadLine();
}
```

What can the user enter to *exit* this loop:

- There is nothing the user can enter to exit this loop
- Either "Yes" or "yes"
- Anything that is different from "Yes" and "yes"
- Anything

20. Consider the following code:

```
int answer;
Console.WriteLine("Enter something");
answer = int.Parse(Console.ReadLine());
while (answer > 10 && answer < 100){
 Console.WriteLine("Enter something");
 answer = int.Parse(Console.ReadLine());
}
```

What can the user enter to *exit* this loop?

- Any number not between 10 and 100 (both included)
- Any number between 10 and 100 (both included)
- Any number between 10 and 100 (both excluded)
- Any number not between 10 and 100 (both excluded)

21. What will be displayed by the following code?

```
for (int e = -5; e <= 20; e += 5)
{
 Console.Write(e + " ");
}
```

- 5 0 5 10 15 20
- 5 0 5 10 15
- 0 5 10 15
- 5 -4 -3 -2 -1 0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20
- Nothing
- 0 5 10 15 20

22. What will be displayed by the following code?

```
int variable = 0;
for (int e = 1; e <= 5; e += 1)
{
 variable += e;
}
Console.WriteLine(variable);
```

- 15
- 0
- Nothing
- 1 2 3 4 5
